

Coming soon ... Putting data into practice

Monitor and improve patient journeys and care workflows across GP practices and PCNs to noticeably enhance care access, alleviate administrative burden and generate tangible time and cost savings for the health and care system.

Two modules to optimise your practice

- **Tailor patient booking processes** with a simple, integrated administrative tool that matches patients' needs to the practice's resources and skills.
 - Get your patients the care they need first time.
 - Release clinicians' time by allocating resources more appropriately to patient needs.
 - Reduce admin time, with a clear view of all your available resources.
 - Make booking smarter: automatically generate the optimal matches between patient condition and available staff by area of expertise.
- **Become the best practice for patient care** with a workforce management tool that enables practice administrators to understand and act upon practice demand to better serve their unique patient populations.
 - See how practice teams operate: develop a clear understanding of activities and variations in access to care to drive resource planning.
 - Support your clinical and admin teams to understand how they are working and where improvements can be made, with little effort giving optimal results.
 - Uncover demand patterns for strategic planning and forecasting.
 - Improve patient access by matching workflows and scheduling to predicted demand.

Make your practice work smarter not harder.
